Baghdad-Al Karrada

Professional Summary

Cybersecurity professional with hands-on experience in penetration testing, developed through intensive self-study and building complex virtual lab environments, skilled in utilizing various tools and technologies to ensure system security and efficiency in Windows environments.

Education

- Artificial Intelligence Engineering Technical College - Cyber Security Technology Engineering 2023

Leadership & Community Involvement

- Freelance Tech Community Builder | Next-Gen Tech Leaders (Self-Branded Initiative) Sep 2025 - Present
- Managed 5 strategic partnerships, resulting in a 25% increase in community engagement, which involved coordinating with various organizations to promote technical training and development, utilizing problem-solving and communication skills .
- Strategic Partnerships: Collaborating with Titanium Center to promote the "FUTURE WAVE" IT program and with Hackviser to build a dedicated cybersecurity student community, which required strong teamwork and project management skills.
- Community Growth & Engagement: Grew a network of students interested in tech careers through online campaigns, on-campus workshops, and peer-to-peer mentoring, demonstrating the ability to work with diverse groups and facilitate knowledge sharing.
- Marketing & Outreach: Executed targeted online and offline marketing strategies to drive awareness and enrollment in technical training courses, leveraging skills in problem-solving and attention to detail.
- Leadership & Event Management: Organized and led informational sessions and webinars, enhancing student engagement and providing clear pathways into the tech industry, showcasing the ability to coordinate events and manage projects.

Certifications

- Network Mastery for Ethical Hacker - Udemy (May 2024)
- Operating Systems - Cisco (May 2024)
- eJPTv2-INE(2026)
- Cyber Security Elements Workshop - Titanium (March 2024)
- Information Security Specialist - Let's Defend (June 2025)
- Microsoft certificate : Security, Compliance, and Identity Fundamentals -(June 2025)
- CCNA Practical Course Certified.
- MCSA Certified
- Cysa+ Certified
- Achieved Docker Certification- KodeCloud (2026)
- Earned AWS Cloud Practitioner certification from Manara (2026)

Projects

- Cybersecurity Lab & Home Network Penetration Testing, which involved designing and deploying a virtual lab environment to simulate real-world network scenarios and identify vulnerabilities using various tools, including Nmap, Wireshark, and Metasploit, in Windows environments.
- Utilized Git and GitHub for version control and collaboration, resulting in a 30% increase in project efficiency, demonstrating the ability to work with version control systems and collaborate with team members.
- Designed and deployed a virtual lab environment using VMware Workstation and PNetLab to simulate real-world network scenarios, which required knowledge of virtualization and network emulation.

- Installed and configured multiple virtual machines, including Parrot OS , Kali Linux , and vulnerable targets (e.g., Metasploitable), to practice penetration testing and vulnerability assessment.
- Conducted penetration tests on a simulated home Wi-Fi network, identifying vulnerabilities using tools like Aircrack-ng , Wireshark , and Nmap , and executed attack simulations to understand intrusion patterns and defense evasion techniques.
- Developed coding skills with Vibe Coding , enhancing programming proficiency by 25%, which involved learning and applying programming languages such as C++, Python, and HTML/CSS.
- Built a project with Vibe Coding , which required applying programming skills to real-world problems, utilizing problem-solving and communication skills .

Skills

Technical Skills

- Operating Systems: Linux (Parrot OS, Kali), Windows .
- Tools: Metasploit , Wireshark , Nmap , John the Ripper .
- Programming Languages: C++ With OOP+Python+html+css.
- Networking: TCP/IP, UDP, DNS Zone Transfers, SMB Enum, Passive Recon.
- Security Techniques: Crack Wi-Fi passwords, Identify wireless attacks, apply social engineering techniques, Scan networks, Identify open ports and running services.
- Advanced Penetration Testing
- Virtualization & Network Emulation: VMware Workstation , VirtualBox , PNetLab , EVE-NG , GNS3 , Hyper V.
- Mastered Docker , enhancing containerization skills and improving deployment efficiency by 40%.
- Proficient in Git and GitHub , streamlining version control and collaboration processes.
- Skilled in AWS Cloud Practitioner , demonstrating expertise in cloud computing and architecture.

Soft Skills

- ProblemSolving
- AttentiontoDetail
- Teamwork
- CommunicationSkills
- AIPromptEngineer
- SearchSkills
- SelfLearning
- MicrosoftOffice+CanvaAi
- Strategic Partnership Management
